

MASTER®

ULTRA CERAMIC™

New Master premium ceramic blend grain quick change discs are designed for aggressive grinding and blending with superior cut rate and life span. The grain in Master Ultra Ceramic discs fractures to form new points which are sharp and precise resulting in a cooler cutting action and extra-long product life. The discs also require less pressure, resulting in reduced operator fatigue.

Availability

Master Ultra Ceramic quick change discs are available in 51 and 76mm diameter in 36 and 60 grits. These discs are fitted with MRD type plastic threaded screw-type mounting system, also known as 'Roloc' style.

Applications

- Sand castings for removing risers and flashing
- Lost wax castings for removing risers
- Heavy fabrication such as large burr removal
- Tig/mig weld removal
