

MASTER ABRASIVES

Master appointed UK representative for precision grinding machine manufacturer

Master Abrasives has developed its product and service packages over nearly 50 years of providing solutions for industry. With its abrasives and tool services offering continuing to adapt to industry needs, it is now able to offer a complete solution for precision grinding applications with the addition of a range of precision grinding machine tools to the UK which are accurate, precise and competitively priced, being manufactured by Micromatic Grinding Technologies in India.

Micromatic Grinding Technologies has appointed Master Abrasives as its sole UK representative from 1st September 2016. Its managing director, Kapil Dhand, states "Selling precision grinding machines requires a deep understanding of not only the machine tool but the application itself. We are excited to have found a suitable partner in Master Abrasives who understand the application aspect very well, being sellers of abrasive products for nearly fifty years in the UK market. I am sure that this partnership will add immense value for customers by providing competitive and optimised turnkey solutions for their grinding process needs."

Master Abrasives has developed a strong range of MASTER branded precision products, including conventional grinding wheels, diamond dressers and superabrasive products. This together with its new offering of cost-effective Micromatic hydraulic and CNC cylindrical OD, ID & Centreless grinding machines allows Master to offer a complete precision package.

"Our aim is to provide solutions for every aspect of the grinding process, whether it's the grinding wheel, dresser, coolant delivery system, or now the grinding machine." explains Paul Batson, Managing Director, "Being appointed the UK representative for Micromatic grinding machine tools allows us to offer a one-stop complete solution. Micromatic is a professional company with over forty year's experience that has similar positive work ethics and approach to customers as us. I believe we are an excellent fit and by working closely together our customers will see the benefits. We plan to install a machine at our facility in Daventry later this year to be able to demonstrate the cost-effectiveness of buying a Micromatic machine."

For technical advice and to discuss grinding application requirements, contact Master Abrasives. Further information on Micromatic Grinding Technologies machine tools and Master Abrasives' developments will soon be available on www.master-abrasives.co.uk.
