

MASTER[®]

Abrasive Rollers
for cereal processing

Master Abrasives has developed a range of cereal processing abrasive rollers suitable for application on various types of cereals.

Superior abrasive grain and a high-quality ceramic bond system give Master abrasive rollers excellent durability for an extra-long product life, with very good results in rice whitening applications.

Availability

Available in a range of standard sizes and grades.

Applications

Designed specifically for the food processing industry for processing cereals such as rice.

Features & Benefits

- High-quality rollers offering extra-long life
- Reduction in grain broken and improved productivity
- Provides excellent whiteness and shine in rice
- Individually balanced at quality check stage to prevent vibration while running
- Output quality of rice improved with Master rollers due to fast cutting action
- No bond expiry date

Master's technical team are happy to assist with the assessment of your grinding process.
