

MASTER[®]

Rubber Finishing
Products

The Master range of rubber and epoxy bonded products is available in wheel, quick change disc, point and stick form.

Rubber products have the advantage of a unique cushioned action for a smooth, free cut. They resist clogging or smearing and are ideal for applications where dimensional tolerances and control are vital.

Availability

Master rubber products are available as wheels, points and quick change discs.

The grit sizes offered are from 36 to 1,000 grit and from coarse to extra fine.

Grit Types

- A - Aluminium Oxide
- C - Black Silicon Carbide
- GC - Green Silicon Carbide
- D - Diamond

Applications

- Cutting, grinding and polishing
- Breaking edges, radiusing and polishing out high spots
- Removing rust, cleaning threads and smoothing edges
- Sharpening and honing dies
- A diverse range of industrial applications such as automotive and medical

Grinding Wheels

Master epoxy bonded grinding wheels have a controlled porosity bond with premium abrasives, increasing productivity. Master rubber bonded grinding wheels offer a high-quality finish and excellent wheel life due to cooler cutting.

Points

Master rubber points can smooth and polish hard to reach areas and are widely used for polishing molds, dies, patterns and light castings.

Quick Change Discs

Master rubber bonded quick change discs are designed for effective grinding and polishing of various metals such as stainless steel. Whether requiring heavy stock removal or a polished finish, Master range offers the grade to suit the application.
